

## ECDTHD-ECO LINER Distal Traction (High Density)

- The ECO LOCKING Liner is new to the SA market
- It is almost identical to the AKDT-HD liner but without the stitched in side ribbing allowing some vertical stretch for knee flexion
- However a special distal matrix construction reduce stretch to control distal distraction
- It is called the ECO liner as the manufacturing process takes less energy to produce
- It features a seamless knitted construction outer material cover with a modern look
- This liner is aimed at the active amputee seeking a more durable liner but in a standard beige finish
